

Programa de Pós-graduação em
INFORMÁTICA

PUC Minas

Graph-based image processing

— Overview —
(Professor version)

Silvio Guimarães

Graduate Program in Informatics – PPGINF

Image and Multimedia Data Science Laboratory – IMScience

Pontifical Catholic University of Minas Gerais – PUC Minas

Acknowledgement

Thanks to the Prof. Jean Cousty at ESIEE/France that gently sent me the slides used in the Morpho, Graph and Image course. Some slides of the Graph-based Image Processing course at PPGINF/PUC Minas under supervision of Prof. Silvio Guimarães will be adapted versions of that course.

- ▶ Course - MorphoGraph and Imagery
<https://perso.esiee.fr/coustyj/EnglishMorphoGraph/>
- ▶ Jean Cousty
 - ▶ ESIEE Paris, Département Informatique
 - ▶ Université Paris-Est, LIGM (UMR CNRS, ESIEE...)
 - ▶ E-mail: j.cousty@esiee.fr

- ▶ Instructor
 - ▶ Silvio Guimarães, Sala L305, PUC Minas, sjamil@pucminas.br
 - ▶ Office Hours: 08am–04pm Mondays and Wednesdays
- ▶ Course information
 - ▶ Lectures: 30h
 - ▶ Evaluation could be:
 - ▶ Theoretical exam (2h)
 - ▶ Report and talk of a subject related to graph-based image processing
- ▶ Class meeting time
 - ▶ To be decided
- ▶ Homepage
 - ▶ To be defined

Graphs (source wikipedia)

- ▶ Graph theory is an **informatics** and **mathematic theory**. The algorithms designed to solve problems concerning objects of this theory have numerous applications in all fields linked to the notion of a network (social network, computer network, telecommunication network ...) and in many other fields (i.e. genetic). Some important and difficult theorems, such as the “four colors theorem”, make this theory recognized
- ▶ Origin: The 7 bridges of Königsberg (Leonhard Euler, 1735)

Mathematical Morphology (source wikipedia)

- ▶ **Mathematical morphology (MM)** is a theory and a technique for the analysis and the processing of geometrical structures. It is based on set theory, lattice theory, topology, and random functions.
- ▶ MM development was inspired by problems of image processing, which is its main field of application. MM gives in particular tools for **filtering**,
- ▶ Origin: G. Matheron & J. Serra (1966)
